

## Forehead Temperature Indicators for Anesthesia and PACU

A fast, simple temperature monitoring system based on proprietary color change technology.

Liquid crystals are chemical compounds and mixtures that exhibit the mechanical properties of liquids and the optical characteristics of solids.

Liquid crystals that change color with changes in temperature are known as Thermochromic Liquid Crystals (TLCs). Scientifically they are identified as Cholesteric Liquid Crystals. Micro-encapsulation is the process that primarily protects, stabilizes and makes the liquid easier to use.

FeverScan® products utilize this exciting technology (TLCs) for the measurement of clinical temperature trends in the health-care environment.

FeverScan® thermometers are composed of a series of discrete temperature events, each event shows a green color as the indicated temperature is attained.

The color changes from tan to green to blue as the temperature increases. References are available upon request.

### To Read:

1. Remove backing. Apply to center of forehead. Skin surface should be clean and dry.
2. Read temperature after colors stop changing. Typically 15 seconds.
3. GREEN-Correct reading. If GREEN not visible, subtract 1°F from highest lit channel to obtain correct reading.
